# WWF Climate Solver 2010

The world needs to mobilize in an unprecedented effort to meet the challenges of climate change and to keep global warming below 2 °C. WWF recognizes the need for innovative solutions that enable rapid reductions in greenhouse gas emissions and advocates for technologies that will lead the way to a low-carbon economy.

**Octopus Energi AB**

The Ice-Stick Heat Pump

is an inspiring example of a non-fossil, non-nuclear climate innovation with the potential to substantially reduce greenhouse gas emissions, if provided favourable conditions for development and dissemination.

Stockholm, November 10, 2010

Håkan Wirtén  
Secretary General  
WWF Sweden
